MODEL EXAMINATION

CLASS: II-B.sc(CS),BCA   **MARKS: 75**

SUBJECT: Relational Database Management System   **DATE: -06-2022**

Part-A

ANSWER ALL THE QUESTIONS   **15 x 1=15**

1. A relational database consist of a collection of

(a) Tables (b) Fields (c) Records (d) Keys

2. The term_____ is used to refer to a row

(a)Attribute (b)Tuple (c)Field (d) Instances

3. Course(course_id, sec_id, semester) Here the course_id,sec_id and semester are____ and course is a____

(a) Relation,Attribute (b) Attribute, Relation (c)Tuple, Attribute (d) Tuple, Relation

4. Consider attribute ID,CITY and NAME. Which one of this can be considered as a superkey?

(a) NAME   (b)ID   (c)CITY   (d) CITY,ID

5. The _____ Operations allows the combining of two relations by merging pairs of tuples, one from each,relation,into a single tuples?

(a) Select (b) Project   (c) Join   (d) Union

6. The _____ operator takes the results of two queries and returns only rows that appear in both result sets.

(a) Union   (b)Intersect   (c)Difference   (d)Projection

7. Updates that violate _____ are disallowed?

(a) Integrity constraints (b) Transaction control   (c)Authorization   (d) DDL constraints

8. In SQL the spaces at the end of the string are removed by _____ function?

(a)Upper   (b) String   (c)Trim   (d)Lower

9. Aggregate functions are function that takes a _____ as input and return a single value.

(a) Collection of value (b) Single value   (c) Aggregate value   (d) Both a & b

10. A function that has no partial functional dependencies is in _____ form?

(a) 3NF   (b) 2NF   (c) 4NF   (d)BCNF

11. 4NF is designed to cope with

(a)Transitive dependency (b) Join dependency (c) Multivalued dependency (d) None of these

12. Every Boyce-codd normal form is in

(a) First Normal Form   (b) Second Normal Form   (c) Third Normal Form   (d) All of the above

13. A_____ consists of a sequence of query and or update statements.

(a) Transaction   (b) Commit   (c) Rollback   (d) Flashback

14. What are the ways of dealing with deadlock?

(a) Deadlock Prevention (b) Deadlock Recovery   (c) Deadlock Detection   (d) All of the above

15. The situation where the lock waits only for a specified amount of time for another lock to be released?

(a) Lock timeout (b) Wait-wound (c) Timeout   (d) Wait

PART B — (2 × 5 = 10 marks)

Answer any TWO questions.

16. Describe Database Language.

17. What is the Nested Sub query?

18. What are Domain Constraints?

19. What is the goal of relational database design?

20. What are the states of transaction?

PART C — (5 × 10 = 50 marks)

Answer ALL questions.

21. (a) With a neat diagram, explain the Structure of a DBMS? **(Or)**

    (b) Compare File system and DBMS

22. (a) Explain about the structure of relational databases? **(Or)**

    (b) Explain about the joined relations?

23. (a) Explain the concept of Triggers with example? **(Or)**

    (b) List the types of Authorization?

24. (a) Discuss about 1NF and 2NF?   **(Or)**

    (b) Discuss about 3NF and 4 NF?

25. (a) What is the transaction state and its ACID properties? **Or)**

    (b) Explain the following protocols 1. Lock based Protocols 2. Time stamp based Protocols?

I-MONTHLY EXAM DECEMBER-2021

V-SEMESTER

CLASS : III.B.Sc(CS)'A'&'B'   **GUI PROGRAMMING**   MARKS : 50

TIME : 2 HOURS   **SECTION-A**   10 * 1 = 10

CHOOSE THE CORRECT ANSWER

1. Visual Basic is a tool that allows you to develop application in....
   a. Real time   b. Graphical User Interface   c. Menu Driven   d. None Of These

2. IDE stands for..............
   a. Internet Development Environment b. Integrated Dual Environment c. Integrated Environment d. Integrated Desktop Environment

3. Which of the following provides quick access to commonly used commands in the programming environment
   a. Toolbox b. Object browser c. Toolbar d. None of these

4. ...is used for finding out about objects, properties and methods.
   a. Object browser b. Property window c. Form layout window d. Code editor window

5. In .... window we can write code
   a. Immediate window b. Locals window c. Code editor window d. None of these

6. The form module has file extension.
   a. .frb b. .fra c. .frm d. .fru

7. A text box can hold as many as .... characters for a multi-line text
   a. 42000 b. 48000 c. 23000 d. 32000

8. Control is used to display text, but user cannot change it directly.
   a. Textbox b. Labelbox c. Listbox d. Commandbutton

9. The default datatype for Visual Basic is....
   a. Integer b. Boolean c. Variant d. String

10. Properties can be viewed in two ways
    a. Alphabetic and Categorized b. Alphabetic and Numeric c. Numeric and Alphanumeric
    d. None of these

ANSWER ANY TWO QUESTIONS

11. Explain any 10 Tool box in VB?

12. . Discuss about parts of code Window in VB?

13. Explain the steps to create Menu editor in VB with the neat diagram?

SECTION-C   3 * 10 = 30

ANSWER ANY THREE QUESTIONS

14. Discuss in detail about Toolbars in VB?

15. Write the VB program to create the Arithmetic Calculator

16. Explain about Control Statements in VB in detail?

17. Explain in detail about the types of files in VB ?

18. Write the VB program to generate the Sum of N numbers?

TIRUCHENGODE - 637 205.

55

Name K. Divya   Roll No. 20UCS2241

Course II. B.sc (computer Science)   Subject C programming

Date of Examination

Part - A

1. a The program must have if at least one function

2. b Keywords

3. c ternary

4. d switch

65 / 75

5. b do-while   Received.

6. c Arrays

7. b getchar

8. b Main

9. b Function Type.

10.	a	painters.
11.	a	structure
12.	d	union initialized all members as a structure
13.	d	FILE is a structure and Fp is a pointer to the structure of FILE type
14.	a	A character string containing the name of the file and the second argument is the mode
15.	a	The character written

Part - B.

16. Structure of c Programming :-

   program can be viewed as

a group of building blocks called

functions. Functions are subrountine that

may include one or more statements

designed to perform a specific task.

→ A c program may contain one or more sections.

→ Documentation Section

→ Link Section

→ Definition Section

→ Global declaration section

→ Main() function section
   {
      Declaration part
      Executable part
   }

   Subprogram Section
      Function 1
      Function 2

→ The Documentation Section consists of a set of comment lines giving the name of the program, the author and other details which the programmer

would like to use later.

⇒ The definition section defines all symbolic constants. Global section which is outside of all functions used to declare variable used in more than one function

⇒ The declaration part declares all the variables used in the executable part.

⇒ The Subprogram section contains all the the user-defined functions that are called in the main function. All section except the Main function section may be absent when they are not required.

20. Defining And opening file:

We must specify the following details to the files.

1. File name

2. Data Structure

3. Purpose

File Name:

→ File name is a string of character

→ It should be a vaild name

→ File name consists of two parts namely

* primary name

* An optional period with extension

Example:

Sowdeswari.txt

Sample.c

Data structure:

⇒ It is defined as file in the library of standard I/O function definitions

⇒ All the files should be declared as type FILE before they are uses

⇒ FILE is defined as data type.

⇒ Fp - pointer to the data type FILE

⇒ FILE is a structure that is defined in the I/O library

Purpose:

The mode indicates the purpose of opening the file.

Mode	Purpose
R	open the file for reading only.
W	open the file for writting only.
A	open the for appending data to it.
r+	The existing file is opened to the beginning for both reading and writting.
w+	Same as W except both for reading and writting file.
a+	Same as except both for reading and writting.

Part - C

21. b) Reading and writting C character:

The simplest of all input/output operations is reading a character from standard input unit and writting it to the standard output unit.

Reading single character can be done by using the function getchar.

Variable-name = getchar();

When this statement is encountered, the computer waits unit a key is pressed and then assigns this character as a value to getchar functions

EX: char name;

name = getchar();

Example:

```c
#include <stdio.h>

main()
{
    char answer;

    printf("would you like my name?\n");
    printf("type y for yes and n for no.");
    answer = getchar();
    if (answer == 'Y' || answer == 'y')
        printf("\n My name is Busy BEE \n");
    else
        printf("\n\n you are good for nothing \n");
}
```

character test function.

Function:

isalnum → is c an alphanumeric character

isalpha → is c an alphanumeric character

isdigit (c) → is c a digit

islower (c) → is c a lowercase

isprintf(c) → is c a printtable character

ispunct (c) → is a punctuation marks

isspace → is a while space character

isupper (c) → is a uppercase letter

Writting a character:

Putchar for writting characters.

Putchar (variable name)

where variable name is a type char
variable containing a character

answer = 'y';

putchar (answer);

22 b) A Program using for Statement :

The if statement is powerful decision making statement and is used to control the flow of execution of Statement. The if statement May be implemented in different forms depending on the complexity of condition to be executed

1. If statement

2. Switch statement

3. conditional operator statement

4. GoTo statement

↦ These statements are popularly known as decision making statements

↦ These statements 'control' the flow

of execution they are also known

as control statement

If Statement :

Syntax:

```
if (test expression)
    Statements;
```

Types:

1. simple if statements
2. if-else statements
3. nested if-else statements
4. elseif ladder

Simple if statement

syntax:

```
if (test expression)
{
    statement block;
}
Statement x;
```

if-else statement

Syntax:

```
if (expression)
{
    statement 1;
}
Else
{
    statement 2;
}
```

Nested if-else statements

Syntax:

```
if (expression)
{
    if (expression-2)
    {
        if (expression-3)
        {
            Statement -1;
        }
        else
```

```
                {
                    statement -2 ;
                }
            }
        else
            {
            statement-3;
            }
    }

else if ladder statements
syntax:
    if (expression -1)
    {
    statement - 1;
    }
    Else if (expression -2)
    {
    statement - 2;
    }
    Else if (expression- 3)
    {
    statement - 3;
    }
```

Else

```
{
    statement _n;
}
```

Switch statements :

It is multiway branching statements

Syntax:

```
switch (expression)
{
    case 1:
    {
        statements;
        break;
    }

    case 2:
    {
        statements;
        break;
    }

    default:
```

```c
{
    statements;
    break;
}
}
```

Example:

```c
/* program to print the digits in words */
main()
{
    int digit;
    printf ("Enter a single digit number \n");
    scanf ("%d", &digit);
    Switch (digit)
    {
    case 0:
        printf ("The number entered is zero\n");
        break;
    case 1:
        printf ("The number entered is ONE\n");
        break;
```

Case 2:

printf("The number entered is Two:\n");

break;

default:

printf("It is greater than Two");

break;

}

}

Conditional operator statements:

The ternary operator ?: is used to form a conditional expression.

Syntax:

expression-1 ? Expression -2;

expression - 3;

Example:

(x>y)? x:y;

GOTO statements:

It's moving one block to another block

syntax:

goto label;

Ex:

goto add;

Decision Making and looping:

The execution of certain statements need to be repeated until a given condition is satisfied or it may have to be repeated for a known number of times.

It also known as an iterative or repetitive construct.

Looping Statement :

1. While (entry controlled loop)

2. do- while (exit controlled loop)

3. for (entry -exit controlled loop).

While statement :

Syntax:

```
while (condition)
{
    statements;
}
```

do- while statements:

Syntax:

```
do
{
    statements;
}
while (expression);
```

For . loop:

```
for (expression-1 ; expression-2 ; expression-3)
{
    statement;
}
```

Unconditional branching statement:

* break statements

* continue statements

1. break:

Syntax:

break;

EX:

char ch;

ch = getchar();

break;

if ((ch == getch()=='n'))

2. continue:

Syntax:

continue;

if (i==0)

continue;

Sum+= i*i;

a) String Handling Function:

The C library supports a large number of string-handling functions that can be used to carry out many of the string manipulations. Following are the most commonly used string handling functions.

Function	Action
strcat()	Concatenates two strings
strcmp()	Compares two strings
strcpy()	copies one string over another
strlen()	Finds the length of a string

combining strings together

The strcat function concatenates the string2 to the end of the string1. The general format is

strcat (string1, string2);

where string1 and string2 are the name of the string variables.

Comparing two strings:

The strcmp function compares two strings, and find out whether they are same of different. If two strings are equal, this function return a value zero

otherwise, the numerical difference

between the first non-matching character is returned. The general format is

strcmp (String1, string2);

where, string1 and string2 are the name of the string variables.

This compares the left-most n character of string1 and string2 and return

* 0 if they are equal

* negative number, if string1 sub string is less than string1 and

* positive number

8 Copying one string into another

The strcpy function copies the

the contents of one string into another. The strcpy function works like a string assignment operator.

The content of string 2 is copied to string 1. The general format is

strcpy (string 1, string 2)

Where string 1 and string 2 are character arrays.

Finding the length of a string:

The strlen() function counts and returns the number of character in a string. it takes the form,

n = strlen (string);

A) Copying and comparing structure Variables:

Two Variables of the same structure type can be copied the same way as as ordinary Variables. If person1 and person2 belong to the same structure, then the following statements are valied

person1 = person2;

person2 = person1;

However, the Statements such as,

person1 = person2;

person1 != person1;

The above statements are not permitted. C does not permit any logical operations on structure variables In case, we need to compare them e, may do so by comparing members individually.

Program:

```
#include <stdio.h>
#include <conio.h>
void main()
{
    struct class
    {
        int number
        char name [20];
```

```
        float    marks;

    };

    struct  class  student 2 = {222, "raj", 67.00};

    struct  class  student 3;

    int x;

    clrscr();

    student 3 = student 2;

    x = ((student 3. Number == student 2. number)

            && (student 3. marks == student 2.

                        marks)) ? 1:0

    if (x == 1)

        printf ("\n student 2 and student 3 are

                                same \n \n");

    printf ("%d %s %f \n", student 3. number,
```

```
                    student 3. Name, students. marks);
        }
        else
        printf("\n students and students are not
                            same\n\n");
        getch();
        }
```

---

25) b) Random access files:

           It is used to access only
particular part of a file and not
in reading with other parts. This
can be achieved by the following
funtion

⇒ ftell()

⇒ rewind()

⇒ fseek()

Ftell function()

⇒ It takes a file pointer as input and return a number of bytes long, that corresponds to the current position.

⇒ The function is useful in saving the current position of the file. Syntax of ftell () function is

$$n = ftell (fp)$$

⇒ n → indicates the relative offset of the current position

rewind() function:

⇒ It takes a file pointer and

reset the position to the start of the file.

⇒ The first byte in the file is numbered as 0, second as 1 and so on

⇒ A file is opened for reading or writting, a rewind is done simplicity

Example:

rewind (fp);

fseek () function:

⇒ It is used to move the file position to a desired location with in the file.

The syntax of fseek() is given by

fseek (file_ptr, offset, position)

→ File ptr → it is a pointer to the file concerned.

⇒ Offset → it is a number or variable of type long. It specific the number of positions to be moved from the location specified by the position.

⇒ Sposition → It is an integer number must take the value given below.

→ When the operation sis successful, fseek return a zero.

→ If we attempt to move the file pointer beyond the file boundaries, an error occurs and fseek return -1.

16. The types of computer.

⇒ Computer may be classified according to the principle of operations, purpose and on the basis of their size and speed.

"Types of Computer"

* Micro computer
* Mini computer
* Super computer
* Network computer

Micro computer:-

⇒ Micro computer uses microprocessor at the basic CPU.

⇒ Micro processor consists of integrated circuits contained on LSI chips.

⇒ These are smallest entity CPU, I/o unit, memory are all implemented by integrated circuits contained on an LSI.

Types:-

* Personal computer
* work station
* portable

Personal computer:

→ It is a single user computer.

→ It consists of less sophisticated video display screen, operating system and networkin capabilities.

ex → Acers Aspire, Compaq Precario, Intl.

Workstation computer:

→ It is also single user computer.

→ workstation are recently used compute

→ It is very expensive & powerful compu

→ It is mainly used by engineers & scientists.

→ Most powerful workstation called Super micro.

Portable computer:

→ Portable computer are becoming small yet more powerful.

→ There are three types of portable computer.

* laptops / note books

* sub note books

* personal digital Assistants.

89

Mini computer:

→ Mini computer also called mid range computers.

→ It used to control machine in manufacturing unit.

→ Most powerful mini computer model is called super minis.

example: client / server model.

Mainframe computer:

→ It is room size system is very large in size.

→ At same way it has large data.

→ It can handle large amount of data.

Super computer:

→ It is fastest calculating device.

→ large amount of data must be process quickly.

→ Super computer are used by government agencies.

Network computer:

→ Network computer designed to connect to internet are called internet boxes.

→ These computers with minimal memory disk storage and ATTESTED power designed.

17. De Morgan's theorem:-

⇒ De morgan's theorem allows large bars in Boolean expression to be broken up into smaller bars over individual variables.

⇒ De Morgan's theorem says that large bar over several variables can be broken between the variables if the sign between the variables is changed.

⇒ De Morgan's theorem can be used to prove that NOR gate is equal to AND gate with inverted inputs.

⇒ De morgan's theorem can be used to prove that (NAND) gate is equal to OR gate with inverted inputs.

⇒ In order to put reduce expression with large bars must first be broken up. This means the first step in reducing an expression is to use De Morgan's theorem.

⇒ It is highly recommended to place parenthesis around ATTESTED where lines have been broken.

$$\overline{AB} = \overline{A} + \overline{B}$$

$$\overline{A+B} = \overline{A}\,\overline{B}$$

example:-

$\Rightarrow$ Apply De morgan's theorem to remove over bar, covering both terms from the expression $X = \overline{\overline{C} + D}$

$\Rightarrow$ To apply De morgan's theorem to expression, you, can break overbar covering both terms and change the sign between the terms. This results in $X = \overline{C} \cdot \overline{D}$. Deleting the double bar gives $X = C \cdot \overline{D}$

De Morgan (cont).

$$X = C \overline{(A+B)} + D$$

$\Rightarrow$ Applying De morgan's theorem and the distributing law :-

$$X = C(\overline{A}\,\overline{B}) + D = \overline{A}\,\overline{B}C + D.$$

21.

(b) Programming languages:-

⇒ Programming languages are said to lower or higher, depending on whether they are closer to languages the computer itself user to languages that people use higher.

⑤ levels of languages:-

⇒ Machine language / first generation language

⇒ Assembly language / second generation language

⇒ Procedural language / third generation language

⇒ Problem-oriented / fourth-generation language. language.

⇒ Natural language / fifth generation language

Machine language:-

⇒ It constructed using binary system of numbers.

⇒ this binary system is based on a digit 0 and 1.

⇒ the decimal system use in ten digits 0 and through 9.

⇒ letters of alphabets also represented as number.

⇒ The letter 'n' represents 1000001.

merits :-

⇒ Its execution is very fast.

⇒ It efficient because computer accept the machine code.

demerits :-

⇒ complexity

⇒ The language are machine dependent.

Assembly languages :-

⇒ It also known as symbolic languages are abbreviation or codes.

⇒ It do not replace machine language.

⇒ This language similar to machine language.

merits :-

⇒ More standardized and easier to use

⇒ operate very efficiently.

⇒ easier to bebug program locate & identify syntax errors.

demerits :-

⇒ program very long.

⇒ less abstract than machine language

⇒ more standardized than machine language

High level languages:-

=> Procedural - oriented or 2nd generation

=> Problem oriented or 4th generation

=> Natural as 5th generation.

Procedural - oriented or third generation.

=> high level languages as general problem or specific problem.

=> general Problem programming languages called procedural languages or third generation languages.

Problem oriented or fourth generation

=> Specific problem programming languages called problem oriented as fourth generation languages.

=> To solve the problems.

=> It have application generators.

Natural as fifth generations:-

=> Natural languages are still in development stages.

=> They are designed to make the connection that human with computers more natural more human like.

→ They are designed allow the computer do become Smarter.

Example: LISP, PROLOG.

25

(b) <u>Conversion binary to ASCII.</u>

4100	21 00 50	LXIH , 5000H	
4103	7E	MOV A,M	
4104	47	MOV B,A	
4105	0F	RRC	
4106	0F	RRC	
4107	0F	RRC	
4108	0F	RRC	
4109	CD 15 41	CALL ASCII	
410C	23	INX H	
410D	77	MOV M,A	
410E	78	MOV A,B	
410F	CD 1541	CALL ASCII	
4112	23	INX H	
4113	77	MOV M,A	

4114   96   HLT

4115   E6 FAR H   ANI OFH

4117   FE 0A   CMA H

4119   DA 1E H   JC CODE

411C   16 07   ADI 04 H

411E   16 30 CODE   ADI 30 H

4120   C9   RET

Before Execution :-

5000 ---→ A2

After execution :-

5000 ---→ A1

5000 ---→ B2

24.

(b) 8085 microprocessor architecture:-

$\Rightarrow$ 85 is pronounced as "eighty-eighty nine" microprocessor.

$\Rightarrow$ It is an 8-bit microprocessor.

Accumulator $\Rightarrow$ 8-bit register used to perform arithmetic, logical, I/o & LOAD/STORE operation.

$\Rightarrow$ It is used to connect internal data bus and ALU.

Arithmetic logic unit

$\Rightarrow$ It performs arithmetic and logical operations like addition, subtraction, AND, OR etc

General purpose register:-

$\Rightarrow$ 6 general purpose registers in each processor.

$\Rightarrow$ These are work in pair to hold 16-bit data and their pairing combination is like B-C, D-E & H-L.

Program counter:-

$\Rightarrow$ It is 16-bit register.

$\Rightarrow$ used to store memory address location of next instruction to be executed.

Stack pointer:-

⇒ It is 16-bit register works like stack is always incremented/decremented by 2 during push & pop operations.

Temporary register:-

⇒ It is an 8-bit register, which holds temporary data of arithmetic and logical operations.

Flag register:-

⇒ It is 8-bit register having five 1-bit flip-flops, which holds either 0 or 1 depending upon the result stored in the accumulator

⇒ These are the set of 5 flip-flops

* Sign (S)
* Zero (Z)
* Auxiliary carry (AC)
* Parity (P)
* Carry

⟹ The Pins of 8085 microprocessor can be classified seven groups.

<u>Address bus</u> ⟹ $A_{15} - A_8$, carries most significant 8-bits of memory I/O address.

<u>Data bus</u> ⟹ $AD_7 - AD_0$, carries least significant 8-bit address & data bus.

<u>Signals and controls</u> :-

* Power supply and clock signals
* Address bus
* data bus
* control and status signals
* Interrupts and externally initiated signals.
* serial I/O ports.

<u>three controls signals</u> :-

RD ⟹ signal indicates selected I/O or memory device to be read or ready for accepting data.

WR ⟹ signal indicates data that selected memory or I/O location.

ALE ⟹ positive pulse generated by microprocessor. If pulse high, it indicates address. If pulse down, it indicates data

23.
(b) three variable input expression:-

⟹ There are 4 minterms for two variable since the map consist of four squares, one for each minterm.

$$m_0 \quad m_1$$

$$m_2 \quad m_3$$

$$0 \quad 1$$

$$x y' \quad x y$$

$$x y' \quad x y$$

⟹ This map shows relationship between square and two variable.

⟹ the 0's and 1's marked for each row and each column designate the values of variable x and y respectively.

⟹ x appears primed in row 0 & unprimed in row 1.

⟹ y appears primed in columns 0 & unprimed in column 1.

$$x + y = x'y + xy' = m_1 + m_2 = m_3$$

	0	0	1
	1	1	1

$$x + y$$

⇒ A three variable map is shown is following

m_0	m_1	m_3	m_2
m_4	m_5	m_7	m_6

(a)

	00	01	11	10
	$x'y'z'$	$x'y'z$	$x'yz$	$x'yz'$
	$xy'z'$	$xy'z$	xyz	xyz'

(b)

⇒ This figure marked with numbers to show relationship between square and three variables.

⇒ There are $2^3 = 8$ minterms for 3 binary variables.

⇒ Therefore a map consists of 8 squares.

example :-

		y' 00	y' 01	y 11	y 10
x'	0			1	1
x	1		1		

ATTESTED

Example :-

Simplify Boolean function

$$A' \quad 0$$
$$A \quad 1$$

(K-map with columns labeled 00, 01, 11, 10; row A'=0 has 1's in columns 11 and 10; row A=1 has 1's in columns 01 and 11; C groups marked below)

$$F = A'C + A'B + AB'C + BC$$

$$F = C + A'B$$

C : central four group.

A'B : light-top 2 group.

22.

(a) Basic law of Boolean Algebra :-

Rules :-

1) $0 + x = x$

2) $1 + x = 1$

3) $x + x = x$

4) $x + \bar{x} = 1$

5) $0 \cdot x = 0$

6) $1 \cdot x = x$

7) $x \cdot \bar{x} = 0$

8) $x \cdot x = x$

9) $\bar{\bar{x}} = x$

10) $x + y = y + x$

11) $x \cdot y = y \cdot x$

12) $x + (y + z) = (x + y) + z$

13) $x (yz) = (xy) z$

4) $x (y + z) = xy + xz$

15) $x + xz = x$

16) $x (x + y) = x$

17) $(x + y) (x + z) = x + yz$

18) $x + x'y = x + y$

19) $xy + yz + x'z = xy + z$

→ These rules may be used to connect a boolean algebra.

→ If $x \cdot 0 = 0$, then $x = 1$ and if $x = 1$, then $x = 0$

OR operation:-

2 Input OR gate		
A	B	A + B
0	0	0
0	1	1
1	0	1
1	1	1

AND operation:

2.	Input	AND gate
A	B	AB
0	0	0
0	1	0
1	0	0
1	1	1

Complement

Not gate	
A	A̅
0	1
1	0
